

Add a connection to Azure SQL Database

- *Open MVC first project in visual studio*
- *In solution explorer, right-click the Connected services node and from the context menu select Add Connected service.*
- *In the Connected services tab, click on add icon for service dependencies.*
- *In add dependency page select Azure SQL Database*
- *If you aren't signed in already, sign into Azure account.*
- *In the Configure Azure SQL Database screen, select an existing Azure SQL Database and select Next.*
- *Create SQL database at the bottom on the screen*
- *Fill out the Azure SQL database: Create new screen and select Create*
- *Enter a connection string name or choose the default and choose whether you want the connection string stored in local secrets file.*
- *Summary changes screen shows all the modifications that will be made to your project if you complete the process. If the changes look OK, choose Finish*
- *The connection appears under the Service Dependencies section of the Connection Services tab.*
